POSITIONING

Software Developer / Systems & Technical Support / Open-Source Technologist. Target remote or hybrid software, systems, developer-support, technical-support, automation, web, data, and infrastructure-adjacent roles.

SUMMARY

Technically versatile software developer and systems specialist with experience spanning web applications, Python, JavaScript, Linux, databases, data analysis, audiovisual systems, networking, and customer-facing technical operations. Founder of 3DVR, an open-source technology initiative focused on practical computing tools and accessible software.

SKILLS

- Python, JavaScript, SQL, HTML, CSS; working knowledge of PHP, Rust, Dart, and C
- React, Next.js, Three.js, Laravel, Flutter, FlutterFlow, REST APIs, responsive web development
- Linux, Debian, Git, GitHub, Bash, Docker fundamentals, VS Code, cloud development, CLI workflows
- SQLite, PostgreSQL concepts, Firebase, data cleaning, visualization, ETL fundamentals, relational modeling
- Technical support, networking, hardware troubleshooting, systems integration, documentation, client communication

SELECTED PROJECTS

- **3DVR Platform and Launch Room:** Next.js/React web tools, structured workflows, private browser-based data handling, analytics integrations, responsive interfaces, production deployments, testing, documentation, and iterative product improvements.
- **Uni Contacts:** FlutterFlow/Firebase/Google APIs/Stripe contact and campaign-management application with authentication, search, imports, scheduling, analytics, and defined application data models.
- **3DVR Show-Tech and RUNE:** Open-source cross-platform control-system architecture for audio, video, lighting, cues, timelines, automation, and networked devices.
- **Open Computing Research:** Debian, RISC-V, Linux system design, WebAssembly, browser-hosted computing, experimental hardware, networking, and documentation.

EXPERIENCE AND EDUCATION

- **3DVR.TECH — Founder / Software Developer, 2022–present:** software prototypes, websites, documentation, development environments, open-source concepts, Git-based workflows, testing, deployments, AI-agent research, automation, distributed systems, and device integration.
- **Encore — Technical Specialist / Former Supervisor, 2013–present:** supports business-critical live systems, isolates failures quickly, communicates clearly, coordinates technical crews of approximately 12–30 people, and explains technical issues to clients and nontechnical users while coordinating across teams and vendors.

- **Work Light Productions — Touring Audio / Systems Technician, United States and Canada, 2017–2022:** maintained, configured, transported, and troubleshot networked computers, digital audio systems, communications equipment, processing racks, and cabling across national theatrical tours; used documentation, testing, inventory controls, and structured troubleshooting to deliver repeatable performance across changing venues.
- **UC San Diego Extension — Data Science and Visualization Boot Camp, January–July 2021.**
- **University of Michigan / Coursera — Python 3 Programming Specialization, 2021.**
- **Additional training:** Linux Foundation LFD111x (Building a RISC-V CPU Core); independent study in React, Three.js, Flutter, Laravel, Rust, Elixir/Erlang, Linux systems, and open hardware.

ADDITIONAL VERIFIED STRENGTHS

- Business-critical incident response, minimal-disruption recovery, client communication, crew leadership, safety, prioritization, and vendor coordination.
- Data-science coursework included Python, SQL, JavaScript, visualization, APIs, databases, statistics, machine-learning fundamentals, and collaborative project development.
- Python specialization included image processing, OCR, computer vision, testing, data structures, and applied software projects.
- Clemson University — Bachelor of Arts in Production Studies in Performing Arts, Audio Technology, 2012.
